

Musiqua! GREEN SE

User Guide

MIA LABORATORIES

Greetings and Welcome!

Thank you for choosing MIA Laboratories.

Please take the time to read through this user guide in order to get familiar with the use of Musiqua! GREEN SE.

Overview:

Musiqua! GREEN SE is a semi parametric EQ, delivering a transparent sound and adding the subtle 'transistor' flavour that is so characteristic of analogue technology. 'Colouring' choice is soft and discrete, handing over complete control of the level of 'colouring' to the user. Since there are no preset bands the user has access to the full frequency range.

Musiqua! GREEN SE adds or subtracts colour, for that classic, yet still so interesting, 1990's sound.

Components:

Musiqua! GREEN SE features 3 knob controls one switch and one button control.

- Frequency selection Knob
- Gain selection Knob
- Colour selection Knob
- x1 – x2 Switch
- Bypass Switch
- Clipping Led

Installation:

Installing Musiqua! GREEN SE is fairly easy, just download and run the appropriate installer for your operating system. The license for this plugin requires the use of iLok license manager software and an iLok account. The license can be deposited on a physical iLok (2nd generation or higher) or on iLok Cloud. For further information regarding the activation process, please refer to the activation guide provided. In case that you do not have the iLok License Manager, or you have an outdated version, you can download it for free: <https://www.ilok.com/#!/license-manager>

Instructions of use:

- Select the Frequency you want to boost or cut and apply the desired amount of gain, 0-100% for boost and -100%-0 to cut. (you can use the x2 switch to quickly increase the gain of the selected frequency so you can hear it clearly without affecting your gain settings)
- Add as much colour as you like from 0-100%

Controls:

FREQUENCY SELECTION

The Frequency knob is selecting the desired frequency to be boosted or cut.

There are no restrictions or preset frequencies so you are free to choose any frequency you want. You can input values manually by double-clicking the number-field under the knob.

GAIN CONTROL

The Gain knob is selecting the desired amount of Gain that will be applied to boost or cut the selected frequency. Ranges from -100% to 100%.

COLOUR CONTROL

The Colour knob is selecting the desired amount of Colour that will be applied to the selected frequency. Ranges from 0% to 100%.

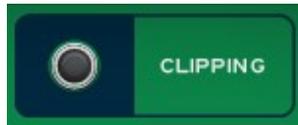

x1 - x2 SWITCH

This Switch when set to x2 doubles the amount of the selected Gain to be applied to the main Frequency and Colour. x1 is for normal operation.

BYPASS BUTTON

This button bypasses the sound processing of Musiqua GREEN SE, so you can compare the original versus the processed signal.

CLIPPING LED

If the output of the Musiqua GREEN SE exceeds 0 dBFS, this LED will turn orange.

Caution: Musiqua GREEN SE adds a lot of gain (exactly like its analogue counterparts) so beware of your gain structure on the channel you use it.

Tip: You can try Pi & Phi in your chain right after this plugin, for enhanced results and brighter colour. You can try Pi & Phi here: <https://mialaboratories.com/plugins/>

Thank you for using MIA Laboratories.

May the sound be with you!
